

High Purity diaphragm valve, plastic

Construction

The GEMÜ 690HP diaphragm valve has a low maintenance membrane actuator which can be controlled by air or inert gases. Normally Closed (NC), Normally Open (NO) and Double Acting (DA) control functions are available. All medium wetted parts and the actuator housing are made of high-grade plastic materials which can be selected to suit the application.

Features

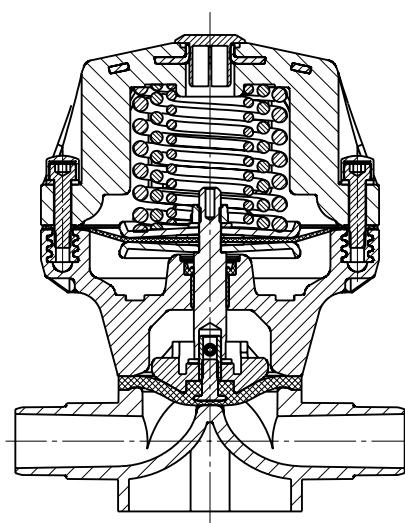

- Suitable for inert and corrosive* liquid and gaseous media, particularly high purity media
- All medium wetted parts and the housing are made of high-grade plastic
 - Valve body: PFA inliner/PVDF outliner (carbon-filled) or PVDF, depending on the connection
 - Diaphragm material: PTFE/EPDM
- Control connection positioned in-line with flow direction as standard, thus installable in restricted spaces
- Manufactured under cleanroom conditions

Advantages

- Compact, lightweight construction and high performance
- High K_V value
- Minimal deadleg
- Proven long life membrane actuator
- Leak detection hole
- Simple diaphragm replacement
- Optional accessories
 - Electrical position indicators with microswitches or proximity switches
 - Positioners and process controllers

* see information on working medium on page 2

Sectional view

GEMÜ® 690HP

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

Working medium temperature

Valve body PVDF -10 to 80 °C
Dependent on the operating pressure

Ambient temperature

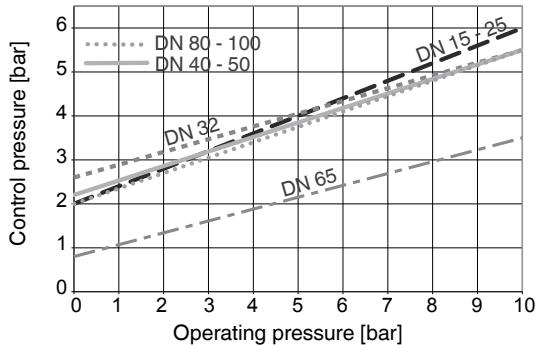

Valve body PVDF -5 to 50 °C

Control / operating pressure [bar]

DN	NPS	Operating pressure		Control pressure	
		Diaphragm EPDM/FPM	PTFE	Control function 1	2 and 3
15-25	1/2"- 1"	0 - 10	0 - 6	4.5 - 7.0	max. 6.0
32-50	1 1/4" - 2"	0 - 10	0 - 6	4.5 - 7.0	max. 5.5
65	2 1/2"	0 - 10	0 - 6	5.5 - 7.0	max. 5.0
80	3"	0 - 8	0 - 6	5.0 - 7.0	max. 5.5
100	4"	0 - 6	0 - 4	5.5 - 7.0	max. 5.5

Control pressure characteristic

Control function 2 and 3

The above values are valid for both flow directions. All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values. Information on operating pressures applied on both sides and for high purity media on request.

The control pressure depending on the prevailing operating pressure, as shown in the diagram, is intended as a guide for operating the system with low wear on the diaphragm.

Control medium

Inert gases

Max. permissible temperature of control medium 40 °C

Filling volume (control function 1)
